## Abstracts

According to our (Global Info Research) latest study, the global Ceramic Foam market size was valued at USD 339.6 million in 2023 and is forecast to a readjusted size of USD 408.6 million by 2030 with a CAGR of 2.7% during review period.

Ceramic foam is a kind of tough foam made from ceramics. Manufacturing techniques include impregnating open-cell polymer foams internally with ceramic slurry and then firing in a kiln, leaving only ceramic material. The foams may consist of several ceramic materials such as aluminum oxide, a common high-temperature ceramic, and gets insulating powers from the many tiny air-filled voids within the material.

The foam can be used not only for thermal insulation, but for a variety of other applications such as acoustic insulation, absorption of environmental pollutants, filtration of molten metal alloys, and as substrate for catalysts requiring large internal surface area.

Global Ceramic Foam key players include Selee, Foseco, Shandong Shengquan, Pyrotek, Drache, etc. Global top five manufacturers hold a share over 55%.

China is the largest market, with a share over 35%, followed by US and EU, both have a share over 40%.

In terms of product, Silicon Carbide is the largest segment, with a share over 75%. And in terms of application, the largest application is Metallurgical Industry Filter, followed by Thermal and Sound Insulating, Automobile Exhaust-Gas Purification, etc.
