According to our (Global Info Research) latest study, the global Ceramic High-Voltage Vacuum Relay market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Ceramic vacuum relay is a kind of ceramic vacuum seal, which isolates the contact point seal of the relay from the outside air to obtain high withstand voltage. It is often used in high-voltage circuits. Vacuum sealing makes it difficult for the relay to generate electric arc. Under ideal conditions, the vacuum may reach 10000 V dielectric strength per 0.1 mm. In addition, because there is no air, the contact will not be oxidized in vacuum, so the contact resistance of vacuum relay is small and stable. Especially suitable for RF applications. A typical ceramic vacuum relay consists of four basic parts: a sealed arc-extinguishing chamber, and the contact point is located inside the arc-extinguishing chamber to achieve the purpose of high voltage resistance. Armature mechanism with moving contact movement. The coil part that provides power. An additional part convenient for the user to install and connect.
