According to our (Global Info Research) latest study, the global Ceramic Ink market size was valued at USD 639 million in 2023 and is forecast to a readjusted size of USD 820.5 million by 2030 with a CAGR of 3.6% during review period.

Ceramic inks are simply carriers of ceramic fine particle metallic oxide pigments (not raw colorants but prefixed stain powders) that are used in automatic application techniques. Inks must have a physical consistency suitable for producing fine detail; this requires that they be suspended in a medium (as opposed to just water). Depending on the application technique, these mediums can be thick and flow like a printing ink. Or they can have a gel consistency that holds itself in place after application. Or they can be made from Nano-size particle stains that stay in suspension in a highly fluid medium (for inkjet printing). They can be water or oil based. They may need to dry quickly, slowly and may not need to dry at all before firing. But the objective is the same: Tune a carrier for the application process so as to achieve a layer of metallic oxide based powder that will produce color exactly where desired and with crisp, well defined color edges.

Global Ceramic Ink key players include Ferro, Torrecid, Esmalglass-Itaca, Colorobbia, Fritta, etc. Global top five players hold a share about 35%.

Europe is the largest market, with a share about 50%, followed by China and North America, having a total share about 50 percent.
