According to our (Global Info Research) latest study, the global Ceramic and Carbon Graphite Bearing market size was valued at USD 606.1 million in 2023 and is forecast to a readjusted size of USD 907.3 million by 2030 with a CAGR of 5.9% during review period.

Ceramic bearings are such bearings, which races/raceways and balls are ceramic. If these bearings run at temperatures up to a maximum 300°C, then these are equipped with cage (bearing spacer, bearing retainer) made of plastic, and above this temperature occur in a special version without cage. Carbon Graphite Bearings are used predominantly in high temperature applications where lubricated bearings cannot be used due to the risk of contamination or seizure, due to chemical corrosion or high expansion rates.
