The ceramic powder tablet press completes the pressing and molding of ceramic powder through the coordinated work of its internal supply system, pressure system and control system. The supply system is responsible for continuously and evenly feeding the pre-mixed ceramic powder into the mold cavity; the pressure system applies a sufficiently large vertical force through the hydraulic cylinder to make the filling inside the mold be evenly and continuously squeezed, thereby forming the desired shape of the ceramic product. The ceramic powder tablet press is mainly used to press ceramic powder or particles into ceramic products with specific shapes and densities, such as ceramic tiles, ceramic utensils, ceramic bottles, etc. In addition, it can also press products of various geometric shapes, such as discs, cylinders, spheres, etc., and can even press products with complex shapes such as text, trademarks, patterns, etc.
