According to our (Global Info Research) latest study, the global Ceramic Submount market size was valued at USD 383.4 million in 2023 and is forecast to a readjusted size of USD 446.5 million by 2030 with a CAGR of 2.2% during review period.

Ceramic submount refers to using the production process of sputtering, deposition, sputtering, etc. , to coat a layer of film on the ceramic substrate material, which is used to improve the heat dissipation performance of the device, especially in the high-power optoelectronic device that produces more heat. The ceramic substrate materials mainly include aluminum oxide, aluminum nitride, beryllium oxide, silicon carbide, boron nitride, silicon nitride, etc. In view of the current market comprehensive price and product performance, alumina and aluminum nitride are the two most common substrates. Although the price of aluminum nitride is about 4 times that of alumina, due to its high thermal conductivity and the better heat dissipation performance, the aluminum nitride is currently the most commonly used substrate, followed by alumina.

For the major players of ceramic submount, the Kyocera maintained its first place in the ranking in 2019, followed by Murata, CITIZEN FINEDEVICE, etc. The Top 3 players accounted for about 50% market share of the overhead conveyor system.

According to regions, Japan dominated the entire market of the ceramic submount with about 69% of the global market share in 2019.
