A Ceramic Washer is a flat, ring-shaped component typically made from ceramic materials such as alumina or zirconia. It serves multiple purposes in various applications. With its non-metallic and often electrically insulating properties, it is used to create a spacer or buffer between two mating surfaces, preventing direct contact and potential damage, reducing friction, and distributing loads evenly. In electrical and electronic assemblies, it helps to maintain proper insulation and separation, safeguarding against short circuits and ensuring the integrity of the circuitry. In mechanical systems, ceramic washers can withstand high temperatures, corrosive environments, and significant mechanical stresses, thereby enhancing the durability and performance of the overall assembly.
