According to our (Global Info Research) latest study, the global Ceramides market size was valued at USD 351 million in 2022 and is forecast to a readjusted size of USD 510.7 million by 2029 with a CAGR of 5.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Global ceramide in personal care key players include Evonik, Croda and Solus Advanced Materials. Global top three manufacturers hold a share about 76%. The global origin is mainly located in North America, Europe, Japan and South Korea. In terms of product, microbial fermentation is the largest segment, with a share over 81%. And in terms of application, the largest application is cosmetics, with a share about 89%.

Ceramides are a family of waxy lipid molecules. A ceramide is composed of sphingosine and a fatty acid. Ceramides are found in high concentrations within the cell membrane of cells. They are one of the component lipids that make up sphingomyelin, one of the major lipids in the lipid bilayer. Contrary to previous assumptions that ceramides and other sphingolipids found in cell membrane were purely structural elements, ceramide can participate in a variety of cellular signaling: examples include regulating differentiation, proliferation, and programmed cell death (PCD) of cells.
