## Abstracts

According to our (Global Info Research) latest study, the global Ceramides in Personal Care market size was valued at USD 351 million in 2023 and is forecast to a readjusted size of USD 510.7 million by 2030 with a CAGR of 5.5% during review period.

Ceramides are a family of waxy lipid molecules. A ceramide is composed of sphingosine and a fatty acid. Ceramides are found in high concentrations within the cell membrane of cells. They are one of the component lipids that make up sphingomyelin, one of the major lipids in the lipid bilayer. Contrary to previous assumptions that ceramides and other sphingolipids found in cell membrane were purely structural elements, ceramide can participate in a variety of cellular signaling: examples include regulating differentiation, proliferation, and programmed cell death (PCD) of cells.

Global ceramide in personal care key players include Evonik, Croda and Solus Advanced Materials. Global top three manufacturers hold a share about 76%. In terms of product, microbial fermentation is the largest segment, with a share over 81%. And in terms of application, the largest application is cosmetics, with a share about 89%.
