## Abstracts

The global Ceramides market size is expected to reach \$ 510.7 million by 2029, rising at a market growth of 5.5% CAGR during the forecast period (2023-2029).

Global ceramide in personal care key players include Evonik, Croda and Solus Advanced Materials. Global top three manufacturers hold a share about 76%. The global origin is mainly located in North America, Europe, Japan and South Korea. In terms of product, microbial fermentation is the largest segment, with a share over 81%. And in terms of application, the largest application is cosmetics, with a share about 89%.

Ceramides are a family of waxy lipid molecules. A ceramide is composed of sphingosine and a fatty acid. Ceramides are found in high concentrations within the cell membrane of cells. They are one of the component lipids that make up sphingomyelin, one of the major lipids in the lipid bilayer. Contrary to previous assumptions that ceramides and other sphingolipids found in cell membrane were purely structural elements, ceramide can participate in a variety of cellular signaling: examples include regulating differentiation, proliferation, and programmed cell death (PCD) of cells.

This report studies the global Ceramides production, demand, key manufacturers, and key regions.
