## Abstracts

According to our (Global Info Research) latest study, the global Cerebral Malaria Therapeutics market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

During cerebral malaria there is a state of unarousable coma with malaria infected blood in the peripheral circulation. The condition of coma is due to some other type of infections or hypoglycemia. The presence of retinopathy has been an addition in the clinical diagnosis of both adult and children. The postmortem studies done for observing the pathophysiology of cerebral malaria has found that Plasmodium falciparum infections accounts for majority of the cerebral malaria cases showing a common feature of vascular sequestration in the brain of infected erythrocytes. There is a difference between cerebral malaria in adults and in children. They can be differentiated based on the infected erythrocytes sequestration pattern with variable vascular pathology.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
