Cerebrovascular Accident, is an acute cerebrovascular disease that manifests itself as an obstruction or rupture of a cerebral blood vessel, resulting in impaired cerebral blood circulation and functional or structural damage to brain tissue. Strokes can be divided into ischaemic strokes (blockage of a cerebral blood vessel) and haemorrhagic strokes (rupture of a cerebral blood vessel), with ischaemic strokes accounting for approximately 87% of all cases. Cerebrovascular Accident Drugs are drugs used to treat or prevent stroke. Ischemic strokes are usually treated by emergency intravenous administration or emergency endovascular surgery, where the drug must be administered within 4.5 hours of the first onset of symptoms with a thrombolytic agent.
