Abstracts

Cerebrovascular diseases are a group of condition characterized by a certain dysfunction of blood vessels supplying the brain and also affect the flow of blood in an individual's brain. For proper functioning of the brain, it needs certain nutrients and oxygen from the arteries. However, if there is any kind of restriction in the blood flow, the brain cells begin to die. The prime causes of cerebrovascular disease are cerebral thrombosis, cerebral embolism, and cerebral hemorrhage. Due to cerebrovascular disease, part of the brain is affected due to bleeding and thereby leads to different types of cerebrovascular diseases such as stroke, transient ischaemic attack (TIA), vascular dementia, and subarachnoid hemorrhage.
