Abstracts

The global Cervical Screening market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Shift towards HPV Testing: Human Papillomavirus (HPV) testing has gained prominence as an effective method for cervical cancer screening. HPV testing is often used in conjunction with or as a replacement for Pap smears due to its higher sensitivity in detecting high-risk HPV strains associated with cervical cancer.

Liquid-Based Cytology: Liquid-based cytology (LBC) has become increasingly popular as an alternative to conventional Pap smears. LBC involves collecting cervical cells in a liquid medium, which can improve sample quality, reduce inadequate samples, and allow for additional testing such as HPV testing or molecular testing.
