According to our (Global Info Research) latest study, the global Cervical Total Disc Replacement Device market size was valued at USD 1403 million in 2023 and is forecast to a readjusted size of USD 3057.5 million by 2030 with a CAGR of 11.8% during review period.

Cervical total disc replacement (CTDR) device is used to treat patients suffering from degenerative disc disorders (DDD). Neck pain is the major cause for development of DDD in cervical region of the spine. Cervical disc replacement procedures is performed for treatment of DDD, where the degenerated disc is removed surgically and an artificial disc is implanted in the vertebra. This is a minimal incision surgery (MIS) and results in quick recovery post-surgery, short hospital stay and low revision surgery rate.

Growing ageing population, low revision surgery rate of cervical disc replacement surgery and increasing demand for advanced innovative CTDR device for treatment of both class I and class II degenerative disc disease are major factors leading to increased demand for CTDR devices, thereby fuelling growth of the CTDR device market.
