According to our (Global Info Research) latest study, the global Cesium-131 market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Cesium 131 (^{131}Cs) is an alternative as an isotope for PPB, with a half life of 9.7 days

Radioisotopes are the unstable form of an element that emit radiation to transform into a more stable form. Radiation is easily traceable and can cause changes in the substance it falls upon. These special attributes make radioisotopes useful in medicine, industry and other areas. Most radioisotopes are artificially produced in research reactors and accelerators by exposing a target material to “intense particles,” such as neutrons or protons, followed by different chemical processes to bring them into the required chemical form.
