## Abstracts

The global Cetyl Alcohol market size is expected to reach \$ 414 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

Cetyl alcohol, scientifically known as 1-hexadecaneol or cetyl alcohol, is a common saturated fatty alcohol. It appears as white, waxy crystals or flaky solids, insoluble in water but readily soluble in organic solvents such as alcohols and ethers. It possesses lubricating, moisturizing, emulsifying, stabilizing, and thickening properties, making it a key industrial raw material for cosmetics, lotions, creams, detergents, plastics, and pharmaceuticals.

The upstream core lies in the oil source, primarily including vegetable oils such as palm oil and coconut oil (natural sources), and ethylene oligomers (synthetic sources). Through high-pressure hydrogenation, fatty acid methyl esters or ethylene are converted into a mixture of fatty alcohols, which is then precisely fractionated to obtain cetyl alcohol. The technological barriers in the midstream manufacturing stage lie in controlling the purity of the fractionation and the granulation/flaky processing technology of the product. High-quality suppliers must ensure the stability of the product in terms of color, odor, and acid value.

In 2025, global sales of high-purity neopentyl glycol were approximately 146,400 tons, with an average market price of approximately US\$2,218 per ton. The industry's gross profit margin was around 15-25%.

Cetyl alcohol, a long-chain fatty alcohol possessing lubricity, emulsification stability, and film-forming properties, benefits from the continued expansion of the global personal care market and the structural reform of replacing petrochemical-based products with

plant-based ones. End consumers' preference for 'naturally derived' labels has driven strong demand growth for palm oil-derived cetyl alcohol, especially in emerging markets such as the Asia-Pacific region, where the upgrading of hair and skin care consumption by the middle class directly boosts the output of the emulsifier market. Secondly, the standardization needs of ointment and suppository bases in the pharmaceutical industry, as well as the development of biodegradable industrial lubricants, have created stable existing and incremental space for cetyl alcohol.

This report studies the global Cetyl Alcohol production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Cetyl Alcohol and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
