Abstracts

The global CFRP Propeller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

CFRP Propeller is a propulsion device made of carbon fiber reinforced plastic. Carbon fiber is a very light yet very strong material, so it is widely used in aerospace, marine, and other applications that require lightweight, high-strength materials. After combining carbon fiber with appropriate plastic resins to make composite materials, lightweight, strong, and well-rigid parts can be produced. CFRP propellers have higher specific strength (material strength per unit mass) than traditional metal propellers, and are more Good fatigue characteristics and corrosion resistance. Additionally, by leveraging the strength of CFRP, thinner propellers with smaller blade areas can be produced, potentially increasing propeller efficiency.

This report studies the global CFRP Propeller production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for CFRP Propeller, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
