According to our (Global Info Research) latest study, the global Chain Combination Sling market size was valued at US\$ 1586 million in 2025 and is forecast to a readjusted size of US\$ 2967 million by 2032 with a CAGR of 9.5% during review period.

Chain combination slings are composed of high-strength alloy steel chains and various end connectors (such as hooks, eyes, ring chains, short links, connecting rings, adjusters, etc.) in a certain configuration. They have extremely high tensile strength, wear resistance and high temperature resistance. Chain combination slings are flexible and can be configured as single-leg, double-leg, three-leg or four-leg lifting forms, and allow for quick replacement or adjustment of lifting methods on site. Its unique adjustability and impact resistance make it perform well in the lifting of heavy irregular objects. Compared with wire rope slings, chain slings are more durable, have a longer service life, and are simple to maintain, so they have been widely recognized and used in the field of industrial production.
