Abstracts

The global Chain Degreasing Lubricant market size is expected to reach \$ 226 million by 2032, rising at a market growth of 7.8% CAGR during the forecast period (2026-2032).

Chain degreasing lubricants are a class of cleaning chemical agents used for the maintenance of bicycle, motorcycle, and industrial drive chains. Their main function is to remove old grease, dust, metal debris, and oxidation residues from the chain surface before relubrication, thereby restoring the chain's metal surface to a clean state and improving the adhesion of subsequent lubricants. These products are typically composed of solvent-based or water-based surfactant systems, possessing the characteristics of rapid dissolution of oil and evaporation for drying. They are widely used in cycling maintenance, machinery maintenance, and drive system repair, and are a key pretreatment product in the chain 'clean-lubrication' maintenance process. Sales volume in 2025 was 5.25 million units, with an average price of \$25, total production capacity of 6 million units, and a gross profit margin of 38%.

From the demand side, the growth of chain degreasing and lubricating products mainly stems from the increasing professionalization of cycling and the standardization of mechanical maintenance. With the increasing frequency of use of bicycles and e-bikes, the chain system, as a core transmission component, directly affects riding efficiency, noise control, and wear life due to its cleanliness. Therefore, users are gradually forming a maintenance habit of 'regular cleaning + re-lubrication.' At the same time, the standardization of repair shops, cycling clubs, and after-sales systems of OEMs is also driving the transformation of chain degreasing products from optional consumer goods to standard maintenance consumables, especially with a significant increase in penetration rate in high-end road bikes, mountain bikes, and long-distance riding

scenarios.

From a supply and competition perspective, this market is evolving towards environmental friendliness, specialization, and systematization. Traditional solvent-based products still dominate the basic market, but due to VOC emissions and environmental regulations, water-based and biodegradable degreasers are rapidly replacing them. High-end products emphasize a balanced performance of 'strong detergency without damaging coatings' to adapt to different chain coatings and sealing structures. Industry competition is not only reflected in cleaning capabilities but also extends to comprehensive performance in metal corrosion control, evaporation rate, residue control, and compatibility with subsequent lubricants. In the future, leading brands are more likely to build a complete maintenance ecosystem through 'cleaner + lubricant + tool kit,' shifting from competition based on single consumables to competition based on systematic solutions.
