According to our (Global Info Research) latest study, the global Chamber Seal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Chamber Seal, means that for interior sealing, the main advantages are the physical strength and chemical resistance of the material. Graphite also has the advantage of increased sliding capacity due to its tribology, resulting in a longer service life (compared to polymers) and resistance to high temperatures. Applications up to 800°C are sealed with carbon floats. Caused by its tribology, this leads to a longer service life (compared to polymers) and resistance to high temperatures. High pressure applications are sealed with armoured carbon rings (non-split) with high mechanical strength.
