Abstracts

According to our (Global Info Research) latest study, the global Chamberless Ball Valve market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Cavity-free ball valves for the chemical, food, pharmaceutical and cosmetic industries. As there is no cavity between the ball and the housing, there is no residual and mixing of old products in the ball valve housing. A major advantage is therefore the trouble-free service, as the residual product does not crystallise, polymerise or otherwise interfere with the valve function. A further advantage is the similar torque, even at different temperatures. These valves are particularly suitable for sample and bottom outlet valves on mixing vessels.
