Chamfer grinding wheels are specialized abrasive tools designed to create a beveled edge or 'chamfer' on a workpiece, typically along the edges of hard materials such as glass, ceramics, metal, or stone. These wheels are commonly used in precision machining and edge finishing applications to improve part durability, safety, and aesthetics. Chamfer grinding helps in preparing surfaces for welding, easing sharp edges, or enhancing the fit between mechanical components. The wheels come in various shapes, sizes, and grit types, and are often used in CNC machines or manual grinders depending on the application.
