## Abstracts

The global Champaka Oil market size is expected to reach \$ 1075 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032). In 2025, global sales of Champaka oil reached 258 tons, with an average price of US\$2852/kg.

Champaka is credited with being an effective oil as an antiviral, antispasmodic, stimulant, febrifuge, antiseptic, and as an astringent. It is also used in high class perfumes, where it produces unique, warm, floral, leafy notes- like fine grade of teas. Botanical Name - *Michelia Champaca*.

The raw material for Champaka oil is the orange-yellow fragrant flower of *\*Michelia champaca L.\**, mainly produced in Karnataka and Tamil Nadu in India and in Thailand. Because the flowers are extremely delicate and have a low oil content, the blooming flowers must be hand-picked at dawn. Only 0.5?0.8 kg of absolute can be obtained from 1 ton of fresh flowers. The purchase price of the flowers is as high as US\$25?35/kg, and the raw material cost accounts for 60?65% of the ex-factory price. Processing involves solvent extraction (petroleum ether/hexane) to obtain a concrete, followed by dewaxing with alcohol, or direct extraction with supercritical CO?. Solvent recovery, energy consumption, labor, and testing account for 25?30% of the cost. Therefore, a 10% fluctuation in the price of fresh flowers can directly translate to a 6?7% change in the essential oil price, and the CO? process further increases costs by 15?20% due to high equipment depreciation.

This report studies the global Champaka Oil production, demand, key manufacturers, and key regions.
