Abstracts

According to our (Global Info Research) latest study, the global Channel Coil Drive market size was valued at US\$ 440 million in 2024 and is forecast to a readjusted size of USD 582 million by 2031 with a CAGR of 4.1% during review period.

The Channel Coil Drive consists of a bi-directional voltage controlled current source designed to drive an inductive load. The output power has its own set of controls, indicators, inputs and outputs. Balanced differential inputs isolate the coil driver from the control electronics.

The electronics and semiconductor industry is benefiting from the rapid development of 5G technology. 5G is driving faster data transmission speeds and lower latency, requiring more semiconductor devices and equipment to support the upgrade of communication infrastructure. The adoption of AI and machine learning is driving the need for high-performance computation and processing power, which is fuelling innovations in the semiconductor industry to meet the requirements in these areas. The semiconductor industry is also seeing an increase in the number of IoT devices, which will require more semiconductor devices to support the upgradation of communication infrastructure. As the number of IoT devices increases, more sensors, connectivity chips, and low-power devices are required. This has fuelled the development of related technologies in the IoT space. The growth of electric vehicles, autonomous driving and in-car entertainment systems is driving the automotive electronics space, requiring a variety of chips and electronic components to support these new capabilities. The growth of the renewable energy sector requires advanced power electronics and semiconductor technologies for more efficient energy conversion and storage. Continuing advances in semiconductor manufacturing technology, such as the

introduction of processes such as 7nm and 5nm, have allowed more transistors to be integrated on smaller chips, improving performance and power efficiency. The global semiconductor supply chain is affected by a number of factors, such as the New Crown epidemic, supply shortages and geopolitical factors, which can lead to capacity constraints and price volatility. The electronics and semiconductor industry has seen a gradual increase in sustainability concerns, including energy efficiency, material recycling and e-waste management.
