Abstracts

According to our (Global Info Research) latest study, the global Charging and Distribution Unit (CDU) market size was valued at US\$ 6620 million in 2024 and is forecast to a readjusted size of USD 14020 million by 2031 with a CAGR of 11.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Charging and Distribution Unit (CDU) refers to a customized on-board power system integrated product that integrates an on-board charger, an on-board DC/DC converter, and a power distribution unit according to the requirements of the vehicle manufacturer. It mainly includes two-in-one products (OBC, DC/DC), three-in-one products (OBC, DC/DC, PDU) and even more highly integrated all-in-one products.

Increasing EV Adoption: The growing awareness of environmental concerns and the desire to reduce dependence on fossil fuels led to an increased demand for electric vehicles. As more consumers switched to EVs, the need for efficient, fast, and reliable charging and distribution unit (CDU) grew, creating a significant market opportunity for charger manufacturers.

High Power Charging: There was a clear trend toward developing high-power on-board chargers to accommodate faster charging capabilities. EV manufacturers were focused on reducing charging times to improve the convenience and usability of EVs. This trend was driven by advancements in charging infrastructure and battery technology, enabling

vehicles to handle higher power inputs.

Bidirectional Charging (V2G and V2H): Vehicle-to-Grid (V2G) and Vehicle-to-Home (V2H) technologies were gaining traction. These systems allowed EVs to not only charge from the grid but also return energy back to the grid or power homes during outages. On-board chargers with bidirectional capabilities were becoming more important as they facilitated this two-way energy flow.

Advancements in Charging Infrastructure: The expansion of charging infrastructure, including Level 2 and DC fast charging stations, played a crucial role in driving the adoption of EVs. To take advantage of these charging options, EVs required compatible on-board chargers to ensure optimal charging speeds and compatibility with different charging standards.

Technological Advancements: Ongoing advancements in power electronics and charging technologies were leading to the development of more compact, efficient, and high-power on-board chargers. These advancements helped address concerns about charging time, range anxiety, and overall EV performance, further fueling market growth.
