According to our (Global Info Research) latest study, the global Cervical Disc Prosthesis market size was valued at USD 504.2 million in 2023 and is forecast to a readjusted size of USD 1327.6 million by 2030 with a CAGR of 14.8% during review period.

An cervical artificial disc (also called a disc replacement, disc prosthesis or spine arthroplasty device) is a device that is implanted into the spine to imitate the functions of a normal disc (carry load and allow motion).

Some of the major factors supporting the growth of the artificial disc market include product and technological innovations; increasing incidence of degenerative disc diseases; rising propensity for minimal incision surgeries; better clinical trial results with cervical total disc replacement (C-TDR) compared to anterior cervical discectomy and fusion (ACDF); long-term cost benefits of disc replacement over the spinal fusion procedures; surging geriatric population; and rising healthcare expenditure.
