The global Cheese Stretching Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cheese stretching machine is a specialized piece of equipment used in the cheese-making process to stretch and shape certain types of cheese, such as mozzarella. The machine typically consists of a heated chamber with a rotating drum or paddles. The cheese curds are placed in the machine, and through the application of heat and mechanical agitation, the curds are stretched and kneaded until they develop the desired texture and consistency. This process aligns the proteins in the cheese, giving it its characteristic stretchy and elastic properties.
