Scope of the Report:

This report focuses on the Chelate Resins in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Chelate resins, belonging to the family of iron exchange resin, are styrene-divinylbenzene polymers to which iminodiacetate groups are introduced. This functional group forms complexes with all the metallic elements except the alkali metals. Each manufacturer has his own brand series products to clients.

As for the application, chelate resins are used to remove base metals, boron, mercury and so on. There is no doubt that chlor-alkali industry owns the largest application share, which was 43.80% in 2016, followed by chemical industry with 26.51% market share. Besides the two major applications, uses in other fields are also expanding, indicating a promising market.

Global production of chelate resin reached to 7562 MT in 2016, from 7043 MT in 2012. North America is the largest production base of chelate resin, which accounted for 34.34% share globally in 2016. Europe is the follower, with 2016 MT produced.

The worldwide market for Chelate Resins is expected to grow at a CAGR of roughly 2.1% over the next five years, will reach 100 million US\$ in 2023, from 91 million US\$ in 2017, according to a new GIR (Global Info Research) study.
