Abstracts

The global Chemical Fixings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Chemical fixings work by using a chemical adhesive to bond the fastener to the substrate. The anchor is inserted into a pre-drilled hole, and the adhesive is then injected into the hole around the anchor. The adhesive then cures and hardens, creating a strong bond between the anchor and the substrate.

This report studies the global Chemical Fixings production, demand, key manufacturers, and key regions.
