According to our (Global Info Research) latest study, the global Chemical Injection Enhanced Oil Recovery market size was valued at USD 938.4 million in 2023 and is forecast to a readjusted size of USD 1301.6 million by 2030 with a CAGR of 4.8% during review period.

The injection of various chemicals, usually as dilute solutions, have been used to aid mobility and the reduction in surface tension. Injection of alkaline or caustic solutions into reservoirs with oil that have organic acids naturally occurring in the oil will result in the production of soap that may lower the interfacial tension enough to increase production.

The growth of the market is driven by limited oil resources, which requires increasing investments in oil transportation. Countries are adopting advanced technologies to increase domestic production, thereby reducing foreign exchange outflows and enhancing energy security to meet demand. These positive factors drive the growth trend of the market.
