Abstracts

The oil and gas chemical injection system integrates software and hardware equipment to inhibit sediment and corrosion and improve the quality of oil and gas before transportation. The equipment required usually varies by application, environment and purpose. It can be installed on the ground or even underground, deep water or other harsh environments. Several components make up a system. The metering pump measures chemicals at low and high pressure through manual, electric or pneumatic mechanisms, and the flow control valve panel allows more than one chemical to be injected into multiple individually adjustable points. Applied chemicals include wax and corrosion inhibitors, demulsifiers, diluents, fungicides, methanol and water treatment chemicals.
