According to our (Global Info Research) latest study, the global Chemical Pesticide Technical Medicine market size was valued at US\$ 9589 million in 2024 and is forecast to a readjusted size of USD 13340 million by 2031 with a CAGR of 4.9% during review period.

Pesticide raw materials refer to various powders and crystals prepared by chemical synthesis, plant extraction or biotechnology that are used as medicines, but cannot be used directly for agricultural use.

Chemical pesticides have long been widely used in agriculture to control pests and increase crop yields. However, growing concerns about their impact on the environment, harmful effects on non-target organisms, and potential risks to human health have led to heightened scrutiny and regulatory restrictions in various regions. As a result, there is growing interest in more sustainable and environmentally friendly alternatives to pest control, including biopesticides, bioinsecticides and integrated pest management (IPM) methods. While demand for chemical pesticide active ingredients may persist in certain regions and for specific pest control needs, the overall market may face challenges owing to shift to safer and greener agricultural practices.
