Abstracts

The global Chemical Sticky Anchor market size is expected to reach \$ 1537 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Chemical sticky anchor (also known as a chemical anchor or adhesive anchor) is a fastening system used to securely fix metal elements such as rebar or threaded rods into concrete, masonry, or stone substrates using a resin-based adhesive. These anchors typically consist of a two-component chemical adhesive (commonly epoxy, vinylester, or polyester) that is injected into a drilled hole, followed by insertion of the anchor rod. Once cured, the adhesive forms a strong bond between the anchor and the base material, providing high load-bearing capacity and resistance to vibration, moisture, and chemicals.

Chemical sticky anchors are widely used in applications such as structural retrofitting, seismic strengthening, bridge construction, curtain walls, railings, and heavy machinery installation. Compared to mechanical anchors, they offer better stress distribution, minimal expansion pressure, and enhanced durability under harsh environmental conditions.

The global sales volume of chemical sticky anchors exceeded 280,000 tons in 2024, with an average selling price of approximately \$3,500 per ton.

The North American market is mature and driven by advanced construction practices, renovation activities, and seismic reinforcement in the U.S. and Canada. Chemical anchors are widely used in infrastructure upgrades and commercial buildings. Strict building codes and performance standards fuel demand for certified, high-strength chemical anchoring systems. Europe has a well-regulated market with a focus on

sustainable construction and retrofit solutions. Countries like Germany, France, and the UK emphasize structural safety and energy efficiency, which supports steady use of chemical anchors in both new and renovated buildings. EU environmental standards have increased the adoption of low-VOC and non-toxic formulations. Asia-Pacific is the fastest-growing region, with booming construction activity in China, India, Southeast Asia, and South Korea. Urbanization, infrastructure expansion, and industrial development drive the demand for chemical sticky anchors, particularly in high-rise buildings, bridges, and industrial facilities. Price sensitivity and local competition are key factors in this market

Global key players of Chemical Sticky Anchor include Simpson Strong Tie, Hilti, Sika, MKT, Fischer, etc. The top five players hold a share over 26%.
