## Abstracts

Chemical transfer pump is any type of pump, whether positive displacement pump or centrifugal pump, that can safely transfer and distribute chemicals between systems. Chemical transfer pump is an important tool for handling hazardous chemicals in many industries. Whether they are used to transport chemicals or assist chemical reactions, pumps need to be able to handle these chemicals effectively and be careful to avoid any damage to surrounding systems or contact with personnel. Therefore, these pumps usually have higher prices. Chemical delivery and metering pumps are used not only in the chemical industry, but also in a variety of applications. For example, use in swimming pools to add acceptable levels of chlorine. It is also used in boilers and power stations to inject chemicals at all stages of the process, including helping to regulate water pressure. In HVAC systems, pumps help to check and fill chemicals required by the process, such as Freon. Inhibitors can also be added to protect pipes and components from corrosion. In other cases, bactericides can be added to prevent the growth of bacteria in lower temperature systems.
