According to our (Global Info Research) latest study, the global Chemicals Boiling Stones market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Chemicals boiling stones, also known as boiling chips or anti-bumping granules, are small, porous stones or chips commonly added to a liquid to promote smooth boiling and prevent sudden, vigorous boiling known as bumping. Made of inert materials like porcelain or glass, they provide nucleation sites for bubbles to form, facilitating even boiling and preventing superheating of the liquid. Chemicals boiling stones are widely used in laboratories during distillation, reflux, and other heating processes to ensure safe and efficient operations. By reducing the risk of bumping, they help maintain temperature control, improve reaction efficiency, and minimize the likelihood of sample loss or contamination.
