The global Chemotherapy Drugs for Neuroblastoma market size is expected to reach \$ 171.1 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

Chemotherapy (chemo) is the use of anti-cancer drugs, which are usually given into a vein. The drugs enter the bloodstream and travel throughout the body to reach and destroy cancer cells. This makes chemo useful for treating neuroblastoma, especially if it can't all be removed with surgery. The most common combination of drugs includes cisplatin (or carboplatin), cyclophosphamide, doxorubicin, vincristine, and etoposide, but others may be used.

This report studies the global Chemotherapy Drugs for Neuroblastoma production, demand, key manufacturers, and key regions.
