Chemotherapy-Induced Nausea and Vomiting (CINV) is one of the devastating side effects for patients undergoing cancer treatment. It is caused when various types of poisonous substances such as chemotherapeutic agents enter in the human body and alert the digestive system during chemotherapy. Besides chemotherapy, there are various types of factors that puts a patient high risk for CINV including female sex, history of alcohol use, CINV & motion sickness and anxiety or depression.

SCOPE OF THE REPORT:

The global CINV & PONV market is expected to grow with increasing cancer incidence, growing female population, increasing pharmaceutical R&D spending, growing healthcare expenditure and accelerating economic growth. Key trends and developments of this market includes progressing drugs under pipeline, high demand for combination therapy and increasing preference for pressure point therapy. However, there are some factors which can hinder growth of the market including entry of generics, stringent regulations and treatment cost.
