According to our (Global Info Research) latest study, the global Chick Heat Lamp market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A chick warming lamp is a device used to provide the extra warmth that chicks need after hatching or just after hatching. This device provides a suitably warm zone for the chicks by generating heat and radiating warmth to the surrounding environment. Due to their small size and incompletely developed feathers, newly hatched chicks are less able to regulate environmental temperature, so additional heat sources need to be provided in the early stages to ensure their growth, health and survival.
