Abstracts

The global Chicory Root Product market size is expected to reach \$ 2426 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032). Global sales of chicory root products reached 299,000 tons in 2025, with an average price of US\$5,242 per ton.

Chicory root comes from a plant with bright blue flowers that belongs to the dandelion family. Employed for centuries in cooking and traditional medicine, it's commonly used to make a coffee alternative, as it has a similar taste and color.

The raw material for chicory root products is the taproot of chicory (*Cichorium intybus* L.), harvested in autumn. After washing, slicing, and drying to a moisture content of 78%, it yields 120-150 kg/mu of dried roots. The dried roots contain 15-20% inulin and 25-30% total sugar. Different products are obtained through processes such as countercurrent extraction, nanofiltration concentration, electro dialysis desalination, and spray drying at 150-200°. The inulin extraction rate is approximately 12-14%, meaning that 120-140 kg of high-purity inulin can be obtained from each ton of dried roots. The farmgate price of the raw material is 1.8-2.2 USD/kg, accounting for 35-40% of the ex-factory price of inulin. The energy consumption for drying, baking, or hot water extraction + nanofiltration concentration accounts for 20-25% of the production cost, while labor and equipment depreciation account for 15-20%.
