According to our (Global Info Research) latest study, the global Children Myopia Control Lens market size was valued at USD 1113.4 million in 2022 and is forecast to a readjusted size of USD 3152.3 million by 2029 with a CAGR of 16.0% during review period.

Myopia, also called near-sightedness or short-sightedness, is a problem with the focusing ability of the eye. It is when the eye is not able to focus properly on objects in the distance. In this study, Myopia Control Spectacle Lenses, such as ZEISS MyoVision Pro Lenses, HOYA MiyoSmart and Essilor® Stellest™ etc. and Myopia Control Contact Lenses (Orthokeratology Lens and Multi-focals (like MiSight)) are focused.

The myopia control lens industry is continuously evolving to address the increasing prevalence of myopia and the growing demand for effective solutions. Several solutions and innovations are being developed and implemented to tackle the challenge of myopia progression.

Specialized Lens Designs: Manufacturers are developing specialized lens designs specifically tailored for myopia control. These lenses employ various optical techniques, such as multifocal optics, peripheral defocus management, and dual-focus designs, to reduce the progression of myopia. These innovative designs aim to optimize visual performance while simultaneously slowing down the elongation of the eye, which is the underlying cause of myopia.

Orthokeratology (Ortho-K): Orthokeratology is a non-surgical method of myopia control that involves wearing specially designed gas-permeable contact lenses overnight.

These lenses reshape the cornea temporarily, providing clear vision during the day without the need for glasses or contact lenses. Ortho-K lenses are particularly popular among children and teenagers as they offer a convenient and reversible option for myopia management.

Soft contact lenses offer an alternative option to spectacles for correcting vision. They are made from a flexible clear oxygen permeable material and fit to closely align with the front surface of the eye. Not all of these myopia control soft contact lenses are available in all countries or eye care practices. A further consideration is local regulatory approvals - in the USA for example contact lenses are approved for use by the Federal Drugs and Administration (FDA). Myopia control contact lenses can be prescribed without FDA approval as 'off-label' use, but FDA approval provides assurance that a lens has been extensively tested and approved for safety and effectiveness. Currently the CooperVision MiSight 1 day lens is the only myopia control soft contact lens to have FDA approval.

According to the report, the global Myopia Control Lens market was 1.08 billion US\$ in 2022 and is expected to 3.21 billion US\$ by the end of 2029, growing at a CAGR of 16.75% between 2023 and 2029.

Asia-Pacific is the largest consumption region of Myopia Control Lens, with 87.67% global revenue market share in 2022. China is the country with the largest contribution in the Asia-Pacific region. In 2022, the revenue share of myopia control lenses accounted for 72.79% of the Asia-Pacific region.
