## Abstracts

According to our (Global Info Research) latest study, the global Children's Companion Robot market size was valued at US\$ 160 million in 2025 and is forecast to a readjusted size of US\$ 251 million by 2032 with a CAGR of 6.7% during review period.

A child companion robot is an intelligent robot designed specifically for children, which aims to provide companionship, education and entertainment for children through functions such as interactive games, educational content and emotional communication.

As an emerging product, children's companion robots still have a lot of room for improvement in terms of technical maturity, market awareness and user acceptance. At present, although there are many children's companion robot products on the market, their popularity and market penetration are still relatively low, and the potential market demand has not been fully tapped. In addition, with the improvement of family income levels, parents are more willing to invest in their children's education and growth, and the demand for high-quality companion products is also increasing. Therefore, with the continuous advancement of artificial intelligence and robotics technology and the deepening of people's understanding of intelligent assisted education, children's companion robots are expected to grow in the future.
