Abstracts

The global Chilled Water and Glycol Coil market size is expected to reach \$ 3214 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, global output of chilled water and glycol coils reaches 4.2 million units, with an average selling price of 520 USD per unit, total production capacity of 4.8 million units, and a gross margin of 30%.

Chilled water and glycol coils are finned-tube heat exchangers used in HVAC and industrial cooling systems, where chilled water or glycol solution circulates inside the tubes to absorb heat from passing air, enabling air cooling, dehumidification, or process temperature control. Glycol coils are specifically applied in low-temperature or anti-freeze environments to prevent system freezing and ensure stable operation.

Upstream mainly consists of suppliers of copper tubes, aluminum fins, steel materials, anti-corrosion coatings, and glycol fluids; the midstream involves coil design, heat transfer engineering, manufacturing, and customized assembly; downstream applications are concentrated in HVAC equipment manufacturers, data centers, commercial buildings, industrial plants, cold-chain logistics facilities, and energy and chemical end users.
