The global Chinese Medicine Powder Injection market size is expected to reach \$ 1477 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Chinese Medicine Powder Injections refer to sterile powdered formulations derived from traditional Chinese medicine through processes such as extraction, concentration, and drying, which require reconstitution with a suitable solvent before intravenous administration. As a form of injectable TCM, powder injections offer advantages in stability, storage, and transportation. They are commonly used in the treatment of acute and severe conditions, especially when formulation stability is critical. However, due to their complex composition and demanding production processes, they also face challenges in quality control and clinical re-evaluation.
