According to our (Global Info Research) latest study, the global Chip Epoxy Flux market size was valued at USD 19 million in 2023 and is forecast to a readjusted size of USD 28 million by 2030 with a CAGR of 6.0% during review period.

Flux has the role of removing any dirt on the solder surface, preventing the oxidation of the base metal and improving solderability on the metal surface. An epoxy-based soldering flux is used to solder a flip-chip IC device to a metallic bond site on a substrate material. Epoxy resin has recently been attracting attention as a way to deal with these issues. Flux that uses epoxy resin can maintain its strength thanks to the flux residue, which improves the adhesion of the solder joints, contributing to improved insulation. The report focus on chip epoxy flux market.
