## Abstracts

According to our (Global Info Research) latest study, the global Chip Packaging COF Substrate market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The chip packaging COF substrate is the key to the current screen transformation. The main principle is to put the display driver IC chip into the flexible FPC cable, and then use the characteristics of the FPC itself to fold it to the bottom of the screen.

Specifically, through thermocompression bonding, the gold bumps of the IC chip and the inner pins on the flexible substrate circuit will be combined. Since the space occupied by the IC chip is released, generally speaking, the width of the lower frame can be reduced by at least 1.5mm.
