## Abstracts

The global Chip-Scale Horizontal Light Distribution LED market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Conventional LEDs are directionally efficient light sources and are therefore often used in a variety of lighting fixtures by controlling the light with secondary optics. However, due to their strong frontal light, there is a tendency for the emitting surface of the lighting fixture to be grainy. Therefore, lighting fixtures using conventional LEDs are designed to be thicker to avoid uneven lighting patterns.

Chip-Scale Horizontal Light Distribution LED is a white LED that realizes a horizontal light distribution. Horizontal Light Distribution LED will contribute to thinner and lighter lighting fixtures and reduce the use of resources for lighting fixture designs as well as the building materials in which they are installed. In addition, the strong horizontal light creates a soft, low-glare light that envelops the entire environment.

This report studies the global Chip-Scale Horizontal Light Distribution LED production, demand, key manufacturers, and key regions.
