According to our (Global Info Research) latest study, the global Chip Target market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The chip is the top application field of the target. It is mainly used in the two links of 'wafer manufacturing' and 'chip packaging'. Among them, the dielectric layer, conductor layer, and protective layer must be sputtered with a target with a purity of 5N or higher. Advanced processes require higher purity metals. Chip targets have the characteristics of multiple varieties, high threshold, and customized research and development. Copper, tantalum, aluminum, and titanium are mainly used to build circuit interconnection conductors in integrated circuits.
