## Abstracts

The global Chip Target market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The chip is the top application field of the target. It is mainly used in the two links of 'wafer manufacturing' and 'chip packaging'. Among them, the dielectric layer, conductor layer, and protective layer must be sputtered with a target with a purity of 5N or higher. Advanced processes require higher purity metals. Chip targets have the characteristics of multiple varieties, high threshold, and customized research and development. Copper, tantalum, aluminum, and titanium are mainly used to build circuit interconnection conductors in integrated circuits.

This report studies the global Chip Target production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Chip Target, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
