Abstracts

The global Chiplet Test Sockets market size is expected to reach $ 980 million by 2032, rising at a market growth of 11.9% CAGR during the forecast period (2026-2032).

In 2025, global Chiplet Test Sockets production reached approximately 1,000,000 units, with an average global market price of around USD 420 per unit. The gross profit margin of major companies in the industry was approximately 35%–55%. In 2025, global production capacity of Chiplet Test Sockets was approximately 1,320,000 units. Chiplet Test Sockets are high-precision semiconductor test interface components designed for electrical connection and mechanical positioning during chiplet, advanced packaging, and heterogeneous integration testing. Products mainly include spring-pin sockets, probe-based sockets, high-frequency test sockets, and low-force contact solutions with characteristics such as low contact resistance, high reliability, and high-speed signal transmission. This market includes dedicated chiplet and advanced packaging test sockets but excludes traditional IC test sockets, general semiconductor test fixtures, and non-semiconductor connectors. The industrial chain of Chiplet Test Sockets includes upstream precision metals, insulating materials, contact pins, machining technologies, surface treatment processes, and electronic testing components. Midstream covers socket design, precision manufacturing, assembly, electrical performance testing, and customization services. Downstream applications mainly include AI processors, high-performance computing chips, advanced semiconductor packaging, server processors, networking chips, and high-end logic semiconductor testing.
